

Upgradation of Benninger sizing machine at Oguz Tekstil

After successfully upgrading more than 100 Sucker machines in the past, PRO-SMH decided to offer such service also for Benninger machines and other brands. It is a great advantage for our customers to have the modernization carried out by specialists who are very familiar with both the machines and the processes involved in weaving preparation. This is the only way to guarantee the best possible results.

With our PRO-UP program, we offer extensive conversions and modernizations that bring the converted systems close to the performance of new machines. We were very proud when Adana-based Oguz Tekstil chose us to modernize one of their existing Benninger machines. Within a very short time, the team of our specialists was able to make the machine available to the customer for production again and thus restore the productivity and reliability of this important production machine in weaving preparation.
