

## French HGP Villersexel decided for PRO-SMH creel

In the Vosges region, HGP Villersexel is one of the best examples of an industry that is always evolving, combining the tradition of ancient textile land with the innovation of technical fabrics and the most efficient fibers.

In its drive for innovation and development of its weaving preparation workshop, HGP Villersexel has chosen PRO-SMH as its partner, with the purchase of a high-productivity V-creel equipped with high-sensitivity optical sensors, allowing very precise monitoring of the yarns and very rapid intervention.

The creel was fitted with a Siemens S7 PLC in a special PRO-SMH configuration, with touch screen, to facilitate its use and programming by operators. In addition, this machine is connected by internet to our service center, always ready to assist the customer if necessary. As a high-tech machine builder and specialist in the renovation of equipment for the preparation for weaving and dyeing of fibers and fabrics, we are happy and honored by the choice of HGP Villersexel and its Production Manager Mr. Yvan Michel, always very attentive to the quality of their products and production tools.
